- Blazor
- Unity

Platform Experience

- PC
- Xbox
- PlayStation

EMPLOYMENT

Blizzard Entertainment

Software Engineer June 2020 - Present

- Shipped Diablo 4, Seasons 1-9, including the Vessel of Hatred expansion
- Created lightweight server container for our utility services, which significantly improved server deployment times by reducing container pull times from ~8 minutes to ~1 minute and cut costs on disk space by reducing install size by 66%.
- Automated world map and monster spawn generation
- Created canary tests that block bad builds from going to automated testing and QA
- Led the planning and creation of a new self-service model for future automated testing that has been integrated into the Graphics and Tech-Art teams
- Spearheaded the execution and visualization of automated performance tests
  - My work is showcased in this GDC Vault talk: Embracing Art Performance On Diablo

DePaul Originals Game Studio

SE Intern August 2019 - June 2020

- Created UE4 tools for creating cinematic camera angles
- Created Blueprint nodes for A* pathfinding

EA Games

QE Intern June 2019 - August 2019

- Expanded our C# test coverage of Madden 20

SIDE PROJECT

League of Legends In-House Discord Bot

- Worked with colleagues on a Discord bot with a PostgreSQL database and web API to help us manage our inhouse League of Legends matches
- DocFX-Generated Documentation

EDUCATION

DePaul University, Chicago, IL

Bachelor of Science | Computer Science – Game Systems

OTHER EXPERIENCE

Internal Mentorship Platform

Software Engineer September 2025 - Present

- Developing a Blazor website with a PostGres backend for a coworker who need helps managing her work mentoring program next January.

Game Jams (12+)

Software Engineer January 2019 - Present

- Participated in and/or coached over a dozen game jams
- My favorite game jam is still used as one of the poster children for Blizzard's yearly internal game jam:
  - Hungry Hungry Hamsters

Expedition Engine

Software Engineer July 2019 - June 2020

- Independent study in college where my team and I created our own game engine in C++
- Created a task graph that uses a thread pool to execute all our work
- Helped set up the double buffers and tasks required to convert our engine from DX11 to DX12
- Added XAudio2 to our engine
- Experimented with Data Oriented Designs for storing our game object and graphics object components
